## DESIGN FEATURES

### Features

- Use AkzoNobel material.
- Super Anti-corrosion
- Epoxy powder coating 200-250um,
- Baking varnish over 200°C,

Free wedge nut, reduces the stem bending forces and at the same time enables it to be easily replaced.

The more compact new cap, reduces the water retention areas in order to reduce the risk of bacterial growth.

One piece stainless steel stem in for better resistance to axial load and to with stand higher operating torques.

Three locking tab for bayonet system prevents self-dismantling.

Dust guard integrating three O-ring shape, prohibiting the introduction of foreign bodies at the stem.

Male guiding system with composite sliding skate reduces the wear of the wedge against the body, allowing a smooth functionality and a longer life time of the valve.

Triple seal at the operating stem to ensure tightness with the test of time (2500 cycles).

New male composite sliding skate technology ensuring a low operating torque even under high differential pressure and preventing damage or corrosion generated by the friction.

Q: How can I contact your sales team for more information?  
 A: You can contact our sales team via email at [sales@rksfluid.com](mailto:sales@rksfluid.com) or by phone at +91 9899 999999.

Q: What are the main products offered by RKSfluid?  
 A: RKSfluid offers a wide range of industrial valves, including ball valves, butterfly valves, and gate valves, designed for various applications in the process industry.
