

- Fireproof structural design, API607 / API6FA Standard
- Flexible sealing ring structure, reliable seating
- Safety locking device, error prevention
- Double block & bleed
- Anti-static design

TYPHON series Metal Seal Ball Valve

Design Features

- The whole configuration -

TYPHON series valve is a floating uni-directional seated ball valve. It includes the main body, secondary body, the main seat, secondary seat, belleville spring, ball, universal joint, stem, packing gland, packing. The body, seat and ball are forged. The maximum temperature endurance is 800 °C. It is used for three-phase flow (gas, solid, liquid), high erosion, high hard granular media, easy to coke materials and high frequency switching conditions.

- Full metal Hard seal -

Between the ball and the seat is metal spherical seal. Between the main seat and the body is the metal flat seal. There is no non-metallic gasket between the seals. The seal pair has tested to "zero leakage".

- Double-arc incision design -

The ball inlet and outlet are designed for double-arc incision, and the two incisions are rotated 180 degrees symmetrically. This design can instantaneously expand the flow area when open and close, reducing the media flow rate, thereby reducing the erosion damage of the ball and the valve seat sealing surface, extending the service life of the valve.

- Spring box design -

The side seat is installed in the seat pocket of the main body. The belleville spring is installed in the spring box formed by the body and the seat. The inner and outer sides of the secondary seat are provided with labyrinth grooves, which prevent the media particles from entering the spring chamber and affecting the spring action.

The secondary seat is driven by a spring to move along the passage axis while providing the preload between the main seat, the secondary seat and the ball.

Our Factory

Company Advantages

01

21 years of professional experience

03

Independent research and development team
28 top senior professional researchers

05

100% high level ex-factory inspection

07

2 years quality assurance, repair and replacement

4 factories

02

2 professional testing centers

04

High quality imported materials

06

- I Business area: fluid control products, technology and environmental protection products.
- II Advanced CNC machining centers, professional process cells, welding equipment, automatic assembly lines and coating.
- III Chinese standard reference unit, to participate in the development of relevant valve industry standards.
- IV We have set up a research and development center in Houston, Texas, in the United States.
- V Product standard: GB, German standard, American standard, TUV CE, ISO 9001, ADWO-2000, TS, PED, WRC WRAS, KTW, API 6D, API609.
- VI Main production: butterfly valve, ball valve, gate valve, non-return valve, globe valves, tube accessories, manual / pneumatic / electric actuator, valve parts.

FAQ

Q: If I need a quote, what information do we need?

A: valve materials, temperature, pressure, medium, application system.

Q: Can you supply actuators, what do you have?

A: Pneumatic, electric, hydraulic solenoid valves. RKSfluid actuators adopt US technology. What you need, just tell us.

Q: What is your production capacity?

A: RKSfluid has four plants that can supply the products you need.

Q: production lead time

A: Normal products are available in 2 ~ 5 working days. Custom base for your needs.

Q: MOQ

A: 1 pc for all products.

Q: How about quality assurance?

A: 100% quality test before delivery, 2 years warranty. Ensure the operational safety of the system.

We have obtained TUV, API, WRAS, CE, ISO certification.

Standard compliant with DIN, ASME, BS EN, JIS, API, AWWA.

Q: How can we provide quality service to our customers?

A: RKSfluid has 20 years of experience and over 70 R&D engineers provide technical support, model selection and installation guide.
