

The Level Control Valve is a modulating valve that accurately controls the water level in tanks. This valve is designed to open when the water level reaches a preset low point, and close drip-tight when the level reaches a preset high point.

But there is no back pressure in the control chamber of the main valve. And the main valve can be fully open Water level

difference :100-1000mm adjustable .

Application: Level control of water tanks, reservoirs, pools and other storage devices.
