

DESIGN FEATURES

Features

- Use AkzoNobel material.
- Super Anti-corrosion
- Epoxy powder coating 200-250um,
- Baking varnish over 200°C,

Free wedge nut, reduces the stem bending forces and at the same time enables it to be easily replaced.

The more compact new cap, reduces the water retention areas in order to reduce the risk of bacterial growth.

One piece stainless steel stem in for better resistance to axial load and to with stand higher operating torques.

Three locking tab for bayonet system prevents self-dismantling.

Dust guard integrating three O-ring shape, prohibiting the introduction of foreign bodies at the stem.

Male guiding system with composite sliding skate reduces the wear of the wedge against the body, allowing a smooth functionality and a longer life time of the valve.

Triple seal at the operating stem to ensure tightness with the test of time (2500 cycles).

New male composite sliding skate technology ensuring a low operating torque even under high differential pressure and preventing damage or corrosion generated by the friction.

APPLICATION SCENARIO

Industrial water application

Power plant

Sea water desalination

Water treatment

Water supply and drainage

HAVC

Food and drug

Q: What is the main product of your company?

A: Our main product is a series of hydraulic cylinders, which are used in various industrial applications.

Q: What are the main features of your hydraulic cylinders?

A: Our hydraulic cylinders are made of high-quality materials, have a long service life, and are easy to maintain. They are also available in various sizes and specifications to meet different needs.

Q: What is the main advantage of your hydraulic cylinders?

A: Our hydraulic cylinders are made of high-quality materials, have a long service life, and are easy to maintain. They are also available in various sizes and specifications to meet different needs.
